# → FOOD SECURITY THEMATIC EXPLOITATION PLATFORM

food security tep

Foodsecurity-tep.net

Data driven information services need substantial ICT infrastructure. If own ICT resources are not adequate or economically meaningful, **cloud platforms** offer a solution as long as they guarantee **data security** and **preserve ownership** of the data.

The "**Food Security TEP",** a **Thematic Exploitation Platform** sponsored by the European Space Agency is such a platform.

The Food Security TEP hosts satellite data and most **advanced cloud computing technologies** to offer flexible hardware resources. It provides easy **access to all Copernicus satellite data** and a wealth of additional data sources. It facilitates implementation of **data analytics** or specific **agricultural services**.

Besides offering standard data analytics tools, it allows adding **new processing algorithms**, their execution, monitoring and maintenance.

Do you have a remote sensing application that you want to try out but lack the necessary **ICT infrastructure** for?

Is your area of interest located in **Africa**?

Is your application based on **Copernicus** satellite data (plus additional data sources)?

We have good news for you!

Remote sensing applications specifically in African countries can be sponsored by ESA within a **dedicated funding program, our Early-Adopter Program!**

Please find more information at:

**https://foodsecurity-tep.net/early-adopters**

Or contact us at:

VISTA GmbH
Gabelsbergerstraße 51
D-80333 München
Tel. +49 89 45 21 614-14
E-Mail: info@foodsecurity-tep.net

The Food Security TEP Open Expert interface allows

➢ **Exploring** satellite data, products & user data as well as applications & processing services

➢ **Developing** your services as **Docker** applications

➢ **Managing & Sharing** your data, services & jobs

➢ **Visualization** of products in the **Analyst**

➢ **Account** management & services billing
